■ Front Grill ventilation

■ False front ventilation

■ Vent in standard joinery carcass

LSRF REFRIGERATED WELL

VENTILATION REQUIREMENTS LINEAR SERIES

If doors are required use gauze or similar breathable material so as hot air can escape.

If possible leave area behind motor open.

Do not stack boxes, crates etc to sides or rear of motor.

For most efficient air flow use a duct system to direct the ambient air intake directly onto the face of the condenser unit.

This allows for the condenser to be placed some distance from the front face.

* Ducted ventilation system built and supplied by customer. Cossiga do not supply any ducting or ventilation grills.

 Ducted ventilation system for drop in unit
